Philip Michael Brown, Jr b 14 APR 1966 (Charlotte Memorial Hospital, Charlotte, Mecklenburg Co, NC) is son of Bonnie Bell Jefferys + gr of Edna Fair U of the Nathan / Gilbert U Sublan. - Bentley Jefferson U line - (5.11) Brophy mtd in Valley Files.

② See Notes of call 5 FEB 1995 Patti Janet Mc Gee to RPH
PMB, Jr is soon to get his MD and will also soon marry.

③ See Ltr 20 JUN 1995 Edna Fair U to RPH

"We were proud to see our grandson, Philip M. Brown, Jr and Hammet Page Fisher graduated from Medical school May 5, 1995 [East Carolina University, Greenville, NC] and happy to see them get married June 10, 1995 in a beautiful church wedding in the small town of Battleboro, NC [Edgecombe Co] which is about 10 miles from Rocky Mount, NC. Our GO "Karie" was the soloist at the wedding.

④ From Notes of RPH Visit 30 MAY 2004 with Bonnie Bell Jefferys. Bonnie reports that PMB, Jr and wife Hammet Page Fisher are presently separated but I could not tell if this meant "on headed for a divorce" or as in "they are relocating and are temporarily in different places". Need to learn more

Sent Flyer on Apex Talk
13 APR 2009

Hi Philip---

Monk Perry and I are making an attempt to get all of the living descendants of Bartley Jefferson Upchurch and any living spouses of such descendants together. We know it will be impossible to get a majority but even a handful could provide a meaningful experience. Cousin Bonnie Jeffreys Brown was kind enough to provide email addresses for those close to her. I am using them to send an announcement of the Reunion. I hope all of you can come. I am also giving an Upchurch Talk in Apex and will send each of you an announcement on that separately.

Can you come?

Phillip Upchurch

⑧ 1 JUN 2013 Bonnie Dell Jeffreys (MOT/O PMO, JIA) sent RPY an email about Philip's being the first to implement a medical procedure. See Pages 3 & 4 for the Press Release

Wilmington Health Surgeon Completes Successful Endurant AUI Surgery

What makes a marriage last so long? According to Pete and Helen Courtney, who will be celebrating their 57th wedding anniversary this September, a strong marriage is a combination of many things including love and health.

And although their love remains strong, Pete developed an emergent medical condition. Recurring kidney infections led him to multiple doctors' visits. In addition to being diagnosed with kidney stones, a CT scan also showed a more ominous diagnosis. Pete had a quickly growing abdominal aortic aneurysm.

An abdominal aortic aneurysm occurs when there is congenital or acquired weakness or thinning of the vessel wall, which then causes an abnormal dilation of the vessel. Untreated and undetected aneurysms carry a high risk of rupturing. Aneurysm rupture is fatal in 85-90% of cases.

Pete was then referred to Philip Brown Jr., MD, FACS, a Wilmington Health vascular surgeon. After evaluating Pete's situation, Dr. Brown believed the best treatment plan was the recently FDA-approved Endurant Aorto-Uni-Iliac Stent Graft System (Endurant AUI). This device uses a fabric-covered stent to seal off the aneurysm and restore normal flow through the aorta, thus preventing life-threatening rupture. In Pete's case, use of this device was essential due to previous vascular reconstruction resulting in anatomy that would have been very difficult if not impossible to manage with a minimally invasive technique before the availability of the Endurant AUI.

Dr. Brown was the first physician in the nation to place an Endurant AUI device. "The Endurant AUI stent graft was the best approach for this particular situation. Previous treatment options would not have allowed an approved, minimally invasive operation, which would have meant a high-risk open operation resulting in a prolonged recovery," said Dr. Brown. "Instead, we were able to give Pete a minimally invasive operation with an overnight hospital stay and a rapid return to normal physical status."

So how does it feel to be the first surgeon in the country to perform an operation with the Endurant AUI device? "It wouldn't matter if I were the first or the fifth," Dr. Brown said. "I'm just happy we have safer alternatives for abdominal aortic aneurysm repair for patients like Pete."

Although patient outcomes vary, the normal recovery time for open surgery treatment of aortic aneurysm repair is four to six weeks. The recovery time for the newly approved surgery is typically less than two weeks. Thanks to Dr. Brown, Pete is on his way to a full recovery and is expected to return to his normal activities well before it's time to celebrate 57 years with Helen.
